

# Air Vents

**Proven**

Same proven, free-floating all stainless steel mechanism as used in Armstrong steam traps.

**Leak-tight**

Positive closing, free-floating stainless steel lever ensures leak-tight closing under all conditions.

**Body options**

Variety of body materials available: polysulfone, cast iron, forged steel and all stainless steel. A material for every application.

**High pressure**

Armstrong air/gas vents can handle applications to 186 barg.

# Selecting The Armstrong Air/Gas Vent

With the desired capacity in m<sup>3</sup>/h known, find the orifice size required from the table on this page. Then find the vent or vents with the correct orifice size on pages AV-294 to AV-303 that will operate at the required pressure with a liquid of the specific gravity being handled.

Example – Find a model number that will vent 88,3 m<sup>3</sup>/h of air (including safety factor of 1,5 - 2,0) from a liquid with a specific gravity of 0,93 at 17 barg. Using the table below, follow the 17 barg line across to the number 103. Orifice size is 5/32". Now go to pages AV-294 to AV-303 checking the 5/32" orifice lines to locate a vent for 17 barg or higher with 0,90 gravity liquid.

**Note:** Since specific gravity falls between 0,95 and 0,90, use 0,90 gravity data. The model 3-AV on page AV-296 is the one to use.

## For Venting During Filling Only

If a vent is required only for getting rid of air when a system is started up, such as when starting up a deep well pump or filling an empty pipe, tank or other vessel, ability of the vent to open at operating pressure can be ignored. In these cases, a model number with a large orifice for fast venting may be selected, but the vent will not open after air is expelled and the system reaches operating pressure.

Table AV-291-1. Discharge of Air Through an Orifice in Nm <sup>3</sup> /h at a Standard Atmospheric Pressure of 1 bar(a) and 21°C

# 1-AVC See-Thru Air Vent

For Pressures to 10 barg or Specific Gravity Down to 0,80

### A See-Thru Body – So You'll Know When It's Working

Now, you can literally see what you've been missing – the early warning signs of a system problem. Since you'll know the operating condition of the air vent, you won't have to waste time and money scheduling maintenance that isn't needed. In other words, you will be able to react to a condition before it becomes a problem.

A simple ball float mechanism requiring no electricity to operate, the new Armstrong 1-AVC discharges automatically only when air/gas are present. That means no liquid loss as with manual venting.

### An Inside Look

See-thru body means you can observe changing conditions as they occur. See a problem in the making – instead of having to deal with it after the fact.

### Efficient Operation

Simple ball float mechanism discharges only when air is present so it doesn't waste liquid.  
Positive Seating  
Free-floating valve mechanism assures positive seating so it prevents liquid loss. There are no fixed pivots to wear or create friction, and wear points are heavily reinforced for long life.

### Reduced Maintenance

Stainless steel internals mean corrosion resistance and reduced maintenance.

### Corrosion Resistance

Long-lasting polysulfone body and reinforced nylon cap resist corrosion and provide long, trouble-free service life.

### Compare... and Save the Difference

Seeing is really believing – especially when you compare the differences in the time and money you can save with a more efficient, easier-to-maintain system. For more information or technical assistance, contact your local Armstrong Representative.

Air Vents

Name of Part	Material
Cap	Reinforced Nylon*
Body	Polysulfone
O-Rings (Body Cap and Fitting)	Nitrile Elastome Compound
Float Lever and Screws	Stainless Steel
Valve & Seat	Stainless Steel
Fitting & Pipe Plug	Reinforced Nylon
Retainer Ring	Zinc Plated Steel

\* UV sensitive

	mm
Inlet Connection	15 – 20
Outlet Connection	15
"A" Face-to-Face	89
"B" Height	171
"C" Bottom to $\bar{C}$	152
Maximum Allowable Pressure (Vessel Design)	10 barg @ 65°C
Maximum Operating Pressure	10 barg
Specific Gravity Range	1.00 to 0.80
Weight in kg (screwed)	0.45

All sizes comply with the article 4.3 of the PED (2014/68/UE).

### How to Order

Inlet ①	Alternate Inlet ②	Outlet ③
20	15	15
15 or 20	15 or 20	15

**Note:** The Armstrong 1-AVC should not be used in an environment where there are high levels of ketones or chlorinated or aromatic hydrocarbons.

Differential Pressure barg	Orifice size (in)	m <sup>3</sup> /h
1.0	1/8"	7.3
2.0		11.0
3.5		16.1
5.0		22.2
7.0		28.7
8.5		34.8
10.0		41.1

**Note:** Discharge of air through an orifice in m<sup>3</sup>/h at a standard atmospheric pressure of 1 bar(a) and 21°C.

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

# Fixed Pivot Ball Float Air/Gas Vents

For Pressures to 41 barg or Specific Gravity Down to 0,83

Model 21-AR

Model 21-312 AR/VAR

Table AV-295-1. 20-AR Physical Data		
Model No.	Cast Iron	Forged Steel

\* Other flange sizes, ratings and face-to-face dimensions are available on request.

\*\* Viton valve seat insert limited to 204°C.

All models comply with the article 4.3 of the PED (2014/68/UE).

† May be derated depending on flange rating and type.

**21-AR** – A small, high-quality economical air vent. It employs a single lever with a fixed pivot and viton seat, ensuring a tight shut-off.

**21-312 AR/VAR** – Forged steel version of the Model 21 with a larger float and higher leverage. Available with screwed, socketweld or flanged connections.

Note: Above vents available in T-316 SS bodies and caps and all SS internals. Aluminum body and cap available for Model 21-AR only.

\* Other seat insert materials available. Consult factory.

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

# Free Floating Lever Air/Gas Vents – Cast Iron

For Pressures to 21 barg or Specific Gravity Down to 0,40

Armstrong free floating lever Air/Gas Vents use the same bodies, caps, lever mechanisms, valves and seats of Armstrong inverted bucket steam traps that have been proven in years of service.

Elliptical floats and high leverage make it possible to open large orifices to provide adequate capacity for vent size and weight. The hemispherical valve, seat and leverage are identical in design, materials and workmanship to those for saturated steam service up to 69 barg, with the exception of the addition of a guidepost to assure a positive, leaktight valve closing under all conditions.

**1-AV** – A cast iron air vent that uses a positive-closing free floating lever to ensure leaktight closing under all conditions. This vent is good for low capacity air/gas venting up to 21 barg.

**2-AV, 3-AV and 6-AV** – Cast iron vents using the same proven free floating lever mechanisms used in Armstrong steam traps. For applications where high air/gas venting capacity is required up to 17 barg.

**Table AV-296-1. Physical Data**

Model No.	Cast Iron

\* If specific gravity falls between those shown, use next lowest: e.g., if actual gravity is 0,73, use 0,70 specific gravity data.

# Free Floating Lever Air/Gas Vents – Forged Steel

For Pressures to 69 barg or Specific Gravity Down to 0,40

Model 32-AV, 33-AV and 36-AV

**32-AV, 33-AV and 36-AV** – Forged steel vents using the same proven free floating lever mechanisms used in Armstrong steam traps.

For applications where high air/gas venting capacity is required up to 69 barg. Available with screwed, socketweld or flanged connections.

**Table AV-298-1. 30-AV Series List of Materials**

\* Other flange sizes, ratings and face-to-face dimensions are available on request.

Shade indicates products that are CE Marked according to the PED (2014/68/UE). All the other models comply with the Article 4.3 of the same directive.

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

# Free Floating Lever Air/Gas Vents – Forged Steel

For Pressures to 69 barg or Specific Gravity Down to 0,40

## High-Temperature Service

Maximum allowable working pressures of floats decrease at temperatures above 38°C. Allow for approximately:

- 10% decrease at 93°C
- 15% decrease at 147°C
- 20% decrease at 204°C

The float is not always the limiting factor, however. Consult with Armstrong Application Engineering if you have a high-temperature application that also requires maximum operating pressures.

## Sour Gas Service

Forged steel and stainless steel traps can be modified to resist hydrogen sulfide stress corrosion. These modifications involve annealing the float, which will reduce the maximum working pressure of the float to about half of its normal value. Consult Armstrong Application Engineering for allowable working pressures.

Maximum Operating Pressures of free floating lever vents with weighted floats for different orifice sizes, and the specific gravities on which they can be used.

# High Leverage Ball Float Type Air Relief Traps

For Low Flows at Pressures to 186 barg or Specific Gravity Down to 0,49

The Armstrong High Leverage Series of Air Relief traps were developed especially for venting gases from low specific gravity fluids at high pressures. They use standard Armstrong forged steel bodies with very high leverage air relief mechanisms. Available with screwed, socketweld or flanged connections.

**Note:** Models 2313-HLAR, 2316-HLAR, 2413-HLAR and 2415-HLAR are also available with cast T-316 stainless steel body and all-stainless steel internals. Consult factory.

### Sour Gas Service

Forged steel and stainless steel traps can be modified to resist hydrogen sulfide stress corrosion. These modifications involve annealing the float, which will reduce the maximum working pressure of the float to about half its normal value. Consult Armstrong Application Engineering for allowable working pressures.

# Free Floating Lever Air/Gas Vents – All Stainless Steel

For Pressures to 41 barg or Specific Gravity Down to 0.50

Model 11-AV

Model 22-AV and 13-AV

The Armstrong all-stainless steel guided lever air vents have been developed to provide positive venting of air/gases under pressure.

The body and cap and all working parts of the models 11-AV, 22-AV and 13-AV are made of high strength, corrosion resistant stainless steel. Body and caps are welded together to form a permanently sealed, tamperproof unit with no gaskets. Elliptical floats and high leverage provide up to 195 m<sup>3</sup>/h capacity for these compact air/gas vents. Lever action is guided to assure proper seating of the valve under all operating conditions.

11-AV, 22-AV and 13-AV – All stainless steel construction where exposure to either internal or external corrosion is a problem. These air/gas vents have the same proven free floating mechanisms used in other Armstrong steam traps. Pressures to 41 barg @ 38°C.

\* If specific gravity falls between those shown, use next lowest: e.g., if actual gravity is 0.73, use 0.70 specific gravity data.

Air Vents

# Armstrong Stainless Steel Thermostatic Air Vents

For Pressures to 20 barg...Capacities to 177 m<sup>3</sup>/h

TTF-1  
Straight-Thru

TTF-1R  
Right Angle

Armstrong offers Thermostatic Air Vents for positive venting of air and other non-condensable gases from steam in chamber type heat transfer equipment. Typical applications include jacketed kettles, retorts, vulcanizers, jacketed sterilizers or other contained equipment where air could accumulate in remote areas of the steam chamber and reduce heat transfer capacity. These vents are balanced pressure air vents that respond to the pressure-temperature curve of steam. Air is automatically vented at slightly below steam temperature throughout the entire operating pressure range.

### Features

- Suitable for pressures from 0 to 20 barg
- All 304-L stainless steel bodies – sealed, tamper-proof
- Balanced pressure thermostatic element vents air at slightly below steam temperature over the entire pressure range – no adjustments required
- Dependable, proven phosphor-bronze bellows caged in stainless steel with bronze valve and stainless steel seat
- Available in straight-thru or right-angle connections

Armstrong thermostatic air vents should be installed at the highest point on a steam chamber, with the air vent located above the chamber. This will minimize the possibility of any liquid carryover, and air can be vented at atmosphere without a drain line.

Table AV-304-1. TTF-1 List of Materials

Name of Part	Material
Body	304-L Stainless steel
Connections	304 Stainless steel
Balanced Pressure Thermostatic Air Vent	Stainless steel and bronze with Phosphor-bronze bellows, entire unit caged in stainless steel
Gasket	Copper clad non-asbestos

Optional: All stainless steel thermostatic air vent.

Table AV-304-2. TTF-1 Physical Data

Model No.	Straight-thru Connections TTF-1		Right-Angle Connections TTF-1R	
	mm	mm	mm	mm

Maximum Allowable Pressure (Vessel Design)	20 barg @ 232°C			
Maximum Operating Pressure	20 barg			
Discharge Orifice Size	3/16"			

All models comply with the article 4.3 of the PED (2014/68/UE).

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

# Stainless Steel Thermostatic Air Vent/Vacuum Breaker

For Pressures to 10 barg...Capacities to 93 m<sup>3</sup>/h

The Armstrong TAVB is a combination thermostatic air vent/vacuum breaker that is ideally suited for steam-filled vessels with modulating controls. The TAVB will vent air and other non-condensables from vessels such as shell and tube heat exchangers, jacketed kettles and steam coils during their operation. It will also break the vacuum that forms during steam control modulation.

This balanced pressure air vent responds to the pressure-temperature curve of steam, and the soft-seated vacuum breaker responds to 0,0051 barg of vacuum.

## Features

- Maximum allowable pressure: 20 barg
- Maximum allowable temperature: 185°C
- Maximum working pressure: 10 barg
- All stainless steel welded construction
- NPT connections

Armstrong thermostatic air vents should be installed at the highest point on a steam chamber, with the air vent located above the chamber. This will minimize the possibility of any liquid carryover, and air can be vented to atmosphere without a drain line.

**Table AV-305-1. TAVB Physical Data (dimensions in mm)**

Model No.		TAVB-2	TAVB-3
Pipe Connections	Thermostatic Air Vent	15	20
	Vacuum Breaker	3/8"	3/8"

Gasket	Copper clad non-asbestos
Vacuum Breaker Body	303 Stainless Steel
Valve	Stainless Steel
Spring	302 Stainless Steel
«O» Ring	EPDM
Screen	Stainless Steel

All sizes comply with the article 4.3 of the PED (2014/68/UE).

**All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.**

TS-2 Air Vent Angle Type

TS-2 Air Vent Straight Type

Armstrong TS thermostatic air vent is offered in both angle and straight patterns. The TS-2 has a balanced pressure thermostatic element with a high quality multiple-convolution bellows. It's ideal for venting air from equipment such as steam radiators and convectors, small heat exchangers, and unit heaters. The TS-2 comes with a strong, cast bronze body and a stainless steel seat. The valve and seat are renewable in-line.

#### Materials

Cap:	Bronze, ASTM B62
Body:	Bronze, ASTM B62
Union Nipple:	Brass, ASTM B584
Valve:	Brass
Valve Seat:	Stainless steel
Element:	Phosphor-bronze bellows

Table AV-306-1. TS-2 Physical Data

Model	TS-2			
	Angle		Straight	
Pattern	mm	mm	mm	mm
Pipe connections	15	20	15	20
"A" Diameter	41	41	41	41
"B" Height	75	76	68	73
"C"	65	73	102	114
"D"	35	41	28	33
Weight in kg (screwed)	0,68	0,79	0,68	0,91

All sizes comply with the article 4.3 of the PED (2014/68/UE).

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

# TV-2 Thermostatic Air Vent

For Pressures to 9 barg...Capacities to 78 m<sup>3</sup>/h

TV-2  
Thermostatic Air Vent

Armstrong offers the Model TV-2 Balanced Pressure Thermostatic Air Vent for positive venting of air from chamber type heat transfer equipment with no loss of steam. Typical applications include jacketed kettles, retorts, vulcanizers, jacketed sterilizers or other contained equipment where air could accumulate at the top of the steam chamber and reduce heat transfer capacity.

The Model TV-2 is a balanced-pressure thermostatic air vent that responds to the pressure-temperature curve of steam at any pressure from light vacuum to maximum operating pressure. Air is automatically vented at slightly below steam temperature throughout the entire operating pressure range.

The thermostatic element is a charged multi-convolution phosphor bronze bellows caged in stainless steel. Valve and seat are also stainless steel designed to meet the most rigid cycling specifications known for this type of service.

## Features

- Stainless steel hemispherical valve and seat
- Thermostatic element comprises a multi-convolution phosphor bronze bellows caged in stainless steel
- Thermostatic element is charged with water to provide positive opening of the valve at slightly below steam temperature and positive closing in the presence of steam throughout the operating pressure range
- ASTM B62 cast bronze body

Armstrong Model TV-2 Thermostatic Air Vents should be installed at the highest points of steam chambers with inlet connections to the vents higher than the highest points of the chambers. Thus installed there is a minimum hazard of any liquid carryover and air can be vented to atmosphere with no drain line necessary.

	mm
Pipe Connections	15
"A" (Diameter)	56
"B" (Height)	89
Weight in kg (screwed)	0,8
Maximum Operating Pressure	9 barg
Maximum Temperature	177°C

Name of Part	Material
Body & Cap	Cast bronze ASTM B62
Gasket	Compressed non-asbestos
Thermostatic Unit Bellows Cage and Cover	Phosphor bronze Stainless steel
Thermostatic Unit Gasket	Copper clad

All sizes comply with the article 4.3 of the PED (2014/68/UE).

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

# 1-AVCW See-Thru Air Vent for Ozone Applications

For Pressures to 10 barg or Specific Gravity Down to 0,80

## What Is Ozone?

Ozone is a gas that forms naturally during thunderstorms when lightning converts normal oxygen molecules (O<sub>2</sub>) into ozone (O<sub>3</sub>). The fresh, sweet smell in the air after a storm is the smell of ozone. The unstable ozone molecule reacts rapidly with most substances and is an extremely strong natural oxidant.

## How Is Commercial Ozone Produced?

Ozone can be formed by exposing air to ultraviolet light; however, the most common method of generating ozone is by passing air through an electrical discharge. Because ozone has strong oxidizing properties, its production requires corrosion-resistant equipment.

## How Is Ozone Used in Water Filtration and Purification?

Because ozone is such an effective oxidant, it kills viruses, bacteria, mold, mildew, fungus and germs. Passing ozone through water achieves high purification rates without any chemical residue. Oxygen is the only by-product.

## Typical Customer Applications:

- Purifying standing ground water in Third World countries.
- Conditioning water for poultry and livestock.
- Purifying water in the bottled water industry.
- Filtering and purifying water for process applications.

## A See-Thru Body Shows You It's Working

Now, you can literally see what you've been missing. The Armstrong 1-AVCW See-Thru Air Vent lets you easily check its operating condition. You won't have to waste time and money scheduling maintenance that isn't needed, and you can quickly react to a condition before it becomes a problem.

## Efficient Operation

Simple ball-float mechanism doesn't need electricity to operate. The air vent automatically discharges only when air or gas is present. No liquid is lost, as with manual venting.

## Positive Seating

Free-floating valve mechanism ensures positive seating and prevents liquid loss. There are no fixed pivots to wear or create friction. Wear points are heavily reinforced for long life.

## Corrosion Resistance

Long-lasting polycarbonate cap and body provide trouble-free operation. T316 stainless steel internal parts resist corrosion and reduce maintenance.

## Compare – and Save the Difference

Seeing really is believing – especially when you compare the Armstrong 1-AVCW See-Thru Air Vent with manual venting. Measure the time and money you can save with a more efficient, easier-to-maintain system. For more information or technical assistance, contact your local Armstrong Representative.

**Note:** The Armstrong 1-AVCW should not be used in an environment where there are high levels of ketones or chlorinated or aromatic hydrocarbons.
